

Full Attack Sequence

Dice Pools • Dodge & Cover • Results • Wounds • Suppression

The 11 official steps condensed into 7 stages. Resolve them in order for each Attack Pool.

Attack dice (red, black, white)

- Hit**Success on the attack.
- Critical**Success on the attack; often triggers weapon effects.
- Attack Surge**Converts to Hit/Critical (Unit Card's surge chart) or spend an Adrenaline token.
- Blank**No effect.

Defense dice (red, white)

- Block**Success on the defense.
- Defense Surge**Converts to Block (Unit Card's surge chart) or spend an Adrenaline token.
- Blank**No effect.

1 Declare Defender

Step 1

- 1** The attacker declares an Attack action against an enemy unit, which becomes the defending unit.
- 2** Measuring from the attacking unit leader: the defending unit must be within Range of at least 1 weapon, and the attacking unit leader must have LOS to at least 1 defending miniature. If either fails, the attack cannot be made.

2 Form the Attack Pool

Steps 2-3

- 1 Eligible miniatures:** any attacking miniature with LOS to at least 1 defending miniature.
- 2 Choose weapons:** each eligible miniature adds up to 1 weapon (within min/max Range, and only once per weapon across the whole sequence). A pool can't mix Melee and Ranged weapons.
- 3** The attacker gathers all the dice for this pool and places them next to the defending unit.
- 4 Declare Additional Defender (optional):** if weapons and eligible miniatures remain unused, repeat steps 1-2 to form a new pool against a different defending unit.

3 Roll Attack Dice

Step 4

- 1 Upgrade/downgrade:** in order, attacker downgrades, defender downgrades, attacker upgrades, defender upgrades. (White↔Black↔Red, never beyond.)
- 2** The attacker rolls all the dice in the Attack Pool.
- 3** The attacker rerolls using Aim tokens (up to 2 dice per token, both rerolled together) or any other ability.
- 4** The attacker converts Attack Surge results (Unit Card's surge chart, or spent Adrenaline tokens).

4 Dodge, Cover & Modify Attack Dice

Steps 5-6

- 1** Ranged attacks only: determine which miniatures are **obscured** (LOS blocked, or blocked by terrain within Range 7 of the miniature and not in base contact with the attacking unit leader).
- 2** If at least half the defending miniatures are obscured, the unit has **Cover** (light or heavy, depending on the terrain).
- 3** The defender rolls 1 white defense die per Hit result remaining in the Attack Pool (the Cover Pool).
- 4 Light Cover:** cancels 1 Hit per Block rolled in the Cover Pool. **Heavy Cover:** cancels 1 Hit per Block OR Defense Surge rolled.
- 5** The defender may spend Dodge tokens (1 token = cancel 1 Hit result, even with no successes remaining).
- 6 Modify Attack Dice:** the attacker resolves their effects, then the defender resolves theirs.

5 Roll & Modify Defense Dice

Steps 7-8

- 1 Gather:** 1 defense die (Unit Card's colour) per Hit + Critical result remaining in the Attack Pool.
- 2 Upgrade/downgrade:** same order as for the attack (attacker downgrades, defender downgrades, attacker upgrades, defender upgrades).
- 3** The defender rolls their defense dice, may reroll them (abilities), then converts Defense Surge results.
- 4 Modify Defense Dice:** the defender resolves their effects first, then the attacker resolves theirs.

6 Compare Results & Suffer Wounds

Step 9

(Attacker's Hit + Critical) > defender's Block

WOUNDS = THE DIFFERENCE

Defender's Block ≥ (Hit + Critical)

NO WOUNDS

The defending player assigns Wounds to a miniature until it's defeated (Wound tokens ≥ Wound threshold) or all Wounds have been assigned. The Wounded miniature with the most Wound tokens must be chosen first. A unit leader can only be assigned Wounds if it's the only miniature remaining.

7 Suppression & Additional Attack Pools

Steps 10-11

- 1** If the attack was Ranged, had at least 1 Hit or Critical in the initial roll, and the defending unit was not defeated: it gains 1 Suppression token.
- 2** If any Attack Pools remain, the attacker chooses one and repeats steps 4-11 against a defending unit.

Command Phase & Priority

Command Cards · Priority · Orders · Pass Pool

1 Select & Play Command Cards

- Each player secretly chooses 1 Command Card from their hand and places it facedown on the battlefield.

2 Resolve Command Cards

- Both players reveal their card at the same time.
- Fully resolve one card's effects before moving to the other. If timing ties, the **blue player** goes first.

3 Determine Priority

A player played the card with fewer pips	THAT PLAYER HAS PRIORITY
Tied pip count	ROLL A RED DEFENSE DIE (Block = priority to the roller, otherwise to the opponent)
Only one player could play a card	THE OTHER PLAYER AUTOMATICALLY HAS PRIORITY
Neither player played a card	ROLL A RED DEFENSE DIE TO BREAK THE TIE

4 Nominate a Commander & Issue Orders

- If the played card names one or more specific units, one of them must be nominated as Commander. Otherwise, any unit can be.
- Starting with the player who has priority, each Commander issues all the Orders listed on their card, if able (an unissued Order is lost). A unit that already received an Order this Round, or that doesn't match the required type, can't receive a new one.

5 Create the Order Pool

- Each player takes 1 Order token (matching Rank) for every undefeated unit that did not receive an Order, then shuffles those tokens together.

6 Create the Pass Pool

Advantage Formula

- Each player counts their undefeated units. The player with **fewer** adds Advantage tokens to their Pass Pool.
- Number of tokens** = (difference between the two totals) – 1.

Example: 8 undefeated units vs. 12 → a difference of 4 → 4 – 1 = 3 Advantage tokens. Once the Pass Pool is created, the Command Phase ends and the Activation Phase begins.

Suppression & Panic

Rally • Suppressed • Panicked • Borrowed Courage • Null Courage

Four independent rules, each triggering in its own situation.

Rally

Every time a unit activates, before making actions, it attempts to Rally:

- 1 Its controller rolls 1 white defense die for each **Suppression** token on the unit.
- 2 Remove 1 Suppression token for each **Block** or **Defense Surge** result rolled.

Suppression Thresholds

Once Rally is resolved, if the unit begins its "Make Actions" step with Suppression tokens remaining, compare their number to its **courage value**:

Suppression tokens < courage value

NO EFFECT

Suppression tokens ≥ courage value

SUPPRESSED: 1 fewer action

Suppression tokens ≥ 2 × courage value

+ PANICKED: no actions, not even free ones

A **Panicked** unit that made no actions removes, at the end of its Activation, a number of Suppression tokens equal to its courage value.

Borrowed Courage (Panic check)

When a unit checks whether it is Panicked, if 1 or more allied units with a **higher courage value** are within Range 3, it uses the highest of those values instead of its own.

EXAMPLE

A unit with 3 Suppression tokens and a courage value of 1 is **not** Panicked if an ally within Range 3 has a courage value of 2 or more ($3 < 2 \times 2$).

Null Courage Value ("–")

These units can never gain or be assigned Suppression tokens, and can never be Suppressed or Panicked. If a unit gains a null courage value during the game, it loses any Suppression tokens it had.

Effect on nearby allies: allied units within Range 3 of a null-courage unit use that unit's courage value for their own Panic check — and therefore can never Panic, regardless of how many Suppression tokens they have.

Terrain & Cover

3 Categories · 3 Movement Effects · Cover · Height

Every terrain feature has a category AND a movement effect — two independent classifications.

3 Terrain Categories

Describes the physical nature of the feature.

SCATTER

Small features (crates, lamp posts). Barricades are open scatter terrain that automatically give heavy Cover to non-Creature/non-Heavy Trooper units.

AREA

A boundary containing multiple elements (forest, ruins). Only the boundary matters. A miniature overlapping it is always obscured.

OBSTACLE

Large features (buildings, cliffs). A Trooper's base must completely overlap it — never just partially.

3 Movement Effects

Independent of the category above — describes how much the feature restricts movement.

OPEN

Does not restrict movement (fields, tall grass, lamp posts).

DIFFICULT

Reduces the Speed of a unit moving into or through it by 1 (minimum 1).

IMPASSABLE

Blocks movement entirely, unless a special rule says otherwise.

Cover

Cover determines, during the "Apply Dodge and Cover" step of the attack sequence, how many Hit results are cancelled. Its value can never exceed 2, for any reason.

No Cover	VALUE 0
Light Cover	VALUE 1
Heavy Cover	VALUE 2

Always resolve effects that **increase** Cover before effects that **reduce** it. A Suppressed unit improves its Cover by 1 (none → light, light → heavy).

Terrain Height

Stand the Range Ruler vertically, one end on the battlefield. The segment containing the feature's highest point determines its height.

MULTI-LEVEL TERRAIN

For a move or a Climb, measure the height of the part being moved to, subtracting the height of any terrain the miniatures are already on.

The Golden Rule of Terrain: a feature's type (category, movement effect, Cover) is always a decision made jointly by the players, to be discussed before the game begins.
