

Can I Shoot This Target?

Visibility · Intervening Terrain · Cover · Target's Order

Follow this tree to determine whether your shot is possible and which rules apply.

Visibility

A target is **visible** if you can draw a line from the head of your operative to any part of the target operative.

Intervening Terrain

A terrain feature is **intervening** if you can draw a line from the shooter's base to either edge of the target's base, and that line is crossed by the terrain.

Cover

If there is **intervening terrain** and the target is within **1"** of it, the target is **in cover**.

⚠ Unless the shooter is within **2"** or less of the target: in that case, its cover is **cancelled**.

Obscured

If **heavy** intervening terrain is more than **1"** from both the shooter and the target, the target is **obscured**.

i A target cannot be both **in cover** and **obscured** by the **same terrain feature**: its owner must choose in that case.

* If the shooter is higher than the target, check the **Vantage Terrain** rule: possible weapon bonus (**Accurate**), or cancelled light cover for a Conceal target.

Vantage Terrain Rules

Height • Target's Order • Accurate • Light Cover

This tree only covers shots made by a shooter positioned on vantage terrain relative to their target.

1 Is the shooter at least 2" higher than the target?

Yes

No

✗ No Vantage effect

2 What is the target's order?

Engage

Conceal

✓ Cannot use light terrain as cover

3 Is the shooter at least 4" higher than the target?

Yes

No

✓ Weapon gains Accurate 2

✓ Weapon gains Accurate 1

▲ Vantage Terrain & Lines of Sight

Cover — When a shooter fires at a target that is up on vantage terrain, the vantage terrain's base that the target's base rests on is ignored (treated as non-existent) when determining intervening terrain: it cannot give the target cover.

Obscured — When determining whether a target is obscured, always ignore heavy terrain connected to the vantage terrain that the shooter or the designated target is on.

🛡 Improved Cover Save

If a target with a **Conceal** order can be targeted because it cannot use **light** terrain for cover, it does not lose its cover save: instead, it is **improved**.

- The target can retain it as a **critical success**, or gain an **additional cover save**.

Actions & AP

What each Universal Action costs, does, and which other actions it rules out this activation.

How AP works

- 1 Each activation has an **AP budget equal to the operative's APL**. Spend it on separate actions, in any order you choose — you can see an action's result before picking the next.
- 2 An operative **cannot perform the same action twice** in one activation, unless a rule explicitly says otherwise.
- 3 If AP-cost changes would reduce an action below 0AP, it costs **0AP** instead — this always takes precedence.

◆ **Movement combo rule:** pick **one** of Reposition / Fall Back / Charge per activation. You may **also** Dash — except Dash cannot be combined with Charge.

Universal Actions

Reposition	1AP	Move up to the operative's Move stat, in straight-line increments. <i>Not while in an enemy's control range. Not in the same activation as Fall Back or Charge.</i>
Dash	1AP	Move up to 3" (ignores the Move stat); cannot climb, but can drop or jump. <i>Not while in an enemy's control range. Not in the same activation as Charge.</i>
Fall Back	2AP	Move like Reposition, but may move through/into an enemy's control range without finishing there. <i>Only if an enemy is within control range. Not in the same activation as Reposition or Charge.</i>
Charge	1AP	Move like Reposition, plus an extra 2"; must finish within an enemy's control range. <i>Requires an Engage order. Not if already within an enemy's control range. Not in the same activation as Reposition, Dash or Fall Back.</i>
Pick Up Marker	1AP	Remove a marker the operative controls; it now carries, contests and controls that marker. <i>Not while in an enemy's control range. Not if already carrying a marker.</i>
Place Marker	1AP	Place a marker the operative is carrying, within its control range. <i>Not in the same activation as Pick Up Marker — unless the operative is incapacitated, in which case this is free (0AP) and takes precedence over anything preventing it.</i>
Shoot	1AP	Resolve a ranged attack (see « Can I Shoot This Target? »). <i>Requires an Engage order. Not while in an enemy's control range.</i>
Fight	1AP	Resolve a melee attack against an enemy, alternating strikes and blocks. <i>Requires an enemy within control range.</i>

Conceal order: blocks Shoot and Charge entirely, and the operative cannot counteract — but it isn't a valid target while in cover. Engage removes all of that, at the cost of being targetable.

Gambit & Counteract Timing

Strategic Gambit • Counteract

Two independent timing rules — one for the Strategy phase, one for the Firefight phase. Not steps of the same sequence.

♦ Strategic Gambit (Strategy phase, Gambit step)

Starting with the player who has Initiative, each player alternates either using a **STRATEGIC GAMBIT** — most commonly a Strategy ploy, which costs 1CP — or passing.

- 1 The player with Initiative goes first: use a STRATEGIC GAMBIT, or pass.
- 2 Players keep alternating, each either using one or passing, back and forth.
- 3 The step ends once **both players have passed in succession** — not just once each overall.

LIMIT

Each specific STRATEGIC GAMBIT can only be used **once per turning point**, per player. Passing doesn't use up your turn to act again later — you can still use a gambit after passing, as long as your opponent hasn't also just passed.

▲ Counteract (Firefight phase)

Trigger: it's your turn to activate a ready friendly operative, but all of your operatives are already expended — while your opponent still has ready ones.

- 1 Select **one expended** friendly operative that has an **Engage order**.
- 2 It performs a single **1AP action for free** (any Universal or unique action, except Guard).
- 3 If it moves, it cannot move more than **2"** total — this overrides its normal Move stat.

GOOD TO KNOW

Counteracting is **not an activation** — it's something you do instead of activating, so the usual "can't repeat the same action" restriction doesn't apply to it. Each operative can only counteract **once per turning point**, and counteracting is always optional: declining still passes the turn back to your opponent.
