

Attack & Damage Sequence

Hit • Wound • Save • Damage • Ward • Allocation

Resolve these steps, in order, for each attack made against a target unit.

1 Hit Roll

1 dice per attack

Unmodified result of 1

ALWAYS FAILS

Unmodified result of 6

CRITICAL HIT

Result ≥ the weapon's Hit characteristic

SUCCESSFUL HIT

Any other result

THE ATTACK FAILS

2 Wound Roll

1 dice per successful hit

Unmodified result of 1

ALWAYS FAILS

Result ≥ the weapon's Wound characteristic

SUCCESSFUL WOUND

Any other result

THE ATTACK FAILS

3 Save Roll

The defender rolls, minus the weapon's Rend

Unmodified result of 1 (save fails)

DAMAGE INFLICTED

Result (after Rend) is not high enough

DAMAGE INFLICTED

Result (after Rend) ≥ the target's Save

ATTACK FAILS

4 Determine Damage

Added to the target unit's damage pool

- 1 Inflict a number of damage points on the target unit's damage pool equal to the weapon's Damage characteristic.
- 2 **Mortal Damage:** entirely skips steps 1–3 (Hit/Wound/Save) and is added directly to the target's damage pool.

5 Ward Save

If the unit has the Ward keyword — 1 dice per damage point in the pool

Result ≥ the unit's ward value

REMOVE THIS DAMAGE POINT

Any other result

THE DAMAGE POINT STAYS IN THE POOL

If a unit has more than one ward save, only the one with the lowest value applies; the others have no effect.

6 Allocate Damage & Slain Models

The target unit's commander chooses

- 1 The target unit's commander allocates the damage points in the pool **one at a time**, in the order of their choosing.
- 2 Each time the number of damage points allocated to the unit equals its Health characteristic, 1 model is slain and removed from play; the count resets to 0.
- 3 Keep allocating damage points until there are none left in the pool.
- 4 After each slain model, the unit must be in a single coherent group — remove the fewest models possible to make this so.

Modifier caps: Hit/Wound rolls are capped at +1/-1; Save rolls are capped at a maximum of +1 (no cap on the negative side). **More than one unit hit?** Resolve this whole sequence for each unit, one at a time, starting with the active player.

Which Unit Fights Next?

Combat Phase • Strike-first • Strike-last

Use this whenever a player must pick a unit to use a Fight ability.

⚡ Strike-first

Units with this keyword must fight before any unit that doesn't have it.

↓ Strike-last

Units with this keyword cannot be picked while there is still an eligible unit that doesn't have it.

▶ Before Picking

Once both players have used their non-Fight Combat Phase abilities (active player, then opponent), they alternate picking a unit to use a Fight ability, starting with the active player. **Each unit in combat must use it if it is able to.**

A unit with both keywords (Strike-first AND Strike-last) is treated as having neither — it joins the "normal" group. Once a player has no more eligible units in the current group, the other player keeps picking from that same group, one after another, until it's exhausted.

Abilities: Timing & the Rules of One

Declare • Reactions • Effect • Rules of One • "Once Per" Timings

Three independent rules that each apply in their own situation — not a sequence to follow every time.

▶ Using an Ability — the 3 Steps

Every time an ability is used, it resolves in this order:

- 1 **Declare the Ability:** the player using the ability tells their opponent which ability is being used and resolves any Declare instructions.
- 2 **Use Reactions:** starting with the player using the ability, the players alternate using any abilities with an appropriate Reaction timing. Players can choose to pass instead of using a reaction, but once **both players consecutively pass**, no further reactions to that ability can be used.
- 3 **Resolve the Effect:** the ability's effect is resolved.

TIMING BARS

The colour of a timing bar is just a visual aid: the ability's own text tells you exactly when it can be used. A green bar signals a defensive ability, often usable in more than one phase.

◆ The Rules of One

1 CORE ABILITY MAX.

A unit cannot use more than **1 Core ability** per phase.

SAME ABILITY: ONCE

A unit cannot use the **same ability** more than once per phase, unless specified otherwise.

PASSIVE ABILITY: ONCE

A unit cannot be affected by the **same passive ability** more than once at the same time.

EXAMPLE

If a unit is within range of two different terrain features that both have the "Cover" passive ability, the effect only applies to it once.

• "Once Per" Timings

The timing part of an ability can say **Once Per Phase / Turn / Battle**. What this limits depends on who uses the ability:

CASE 1 — A UNIT USES THE ABILITY

If the Declare step clearly says to pick a unit to use the ability, **each eligible unit** can use it once during that period (each separately).

CASE 2 — THE PLAYER USES THE ABILITY

If nothing in the ability says a unit uses it, it can be used a **maximum of one time** during that period, for the whole army.

"(ARMY)" SUFFIX

An ability marked Once Per Phase/Turn/Battle **(Army)** can be used a maximum of one time during that period, regardless of how many units could normally use it separately.

Choosing the target of an ability is not the same as **choosing a unit to use the ability** — only the second situation falls under Case 1 above.
