

Attack Sequence

Dice Pools • Criticals • Modify Dice • Success • Damage

The 14 official steps condensed into 6 stages. Resolve them in order for each attack.

Shared faces (attack AND defense)

- 1 face** **Critical** — success; grants 1 extra die on the initial roll.
- 1 face** **Wild** — success; often triggers special rules.
- 2 faces** **Blank** — no effect.
- 1 face** **Failure** — no success; can never be rerolled or changed.

Role-specific faces

- 2 faces** **Hit** — success, counts for the attacker only.
- 1 face** **Block** — success, counts for the defender only.

1 Choose an Attack & a Target

Steps 1-3

- Choose one of the attacks on the active character's Stat Card. If it has a Power cost, it must be payable.
- Declare a target: an enemy character in Line of Sight and within Range of the attack.
- Pay the attack's Power cost, if applicable. If you can't, the attack ends.

2 Create the Dice Pools

Steps 4-5

- Attack pool:** the attacker takes a number of dice equal to the attack's Strength (+/- effects). Always at least 1 die.
- Defense pool:** the defender takes a number of dice equal to the matching Defense stat for the attack's type (Physical/Energy/Mystic) (+/- effects). Always at least 1 die.

3 Initial Rolls & Criticals

Steps 6-8

- The attacker rolls the attack pool; the defender rolls the defense pool. These are the **initial rolls**.
- Each **Critical** in an initial roll grants 1 extra die to roll. Criticals rolled on these bonus dice don't grant further bonus dice.

4 Modify Dice

Step 9

- In order: the attacker modifies their own dice (rerolls, changes), then the defender modifies theirs.
- Then: the attacker may modify the defender's dice, then the defender may modify the attacker's.
- The same die can only be rerolled **once per special rule or ability** that allows rerolling it, even if those rerolls come from different sources.

5 Calculate Success

Step 10

Attacker's total (Critical + Wild + Hit) > defender's total (Critical + Wild + Block)

DAMAGE = SUCCESS GAP

Defender's total ≥ attacker's total

NO DAMAGE (other effects may still trigger)

6 Resolve Effects & Apply Damage

Steps 11-14

- Resolve effects that trigger before damage is dealt: attacker, then defender, then Crisis Cards.
- The defender gains Damage tokens equal to the success gap, capped at their remaining Stamina; any excess damage is ignored.
- The targeted character gains Power equal to the damage suffered (unless stated otherwise, e.g. the Judgment special condition).
- The attack is resolved; resolve effects that trigger after: attacker, then defender, then Crisis Cards.

Commonly mistaken rule (flagged by the rulebook itself): Critical bonus dice (stage 3) are only rolled **once per roll**, not every time a Critical result comes up. **Interacting with an objective token is not an action** (unless a Crisis Card says otherwise).

Special Conditions

10 Conditions • Appendix B

Each special condition is an independent rule — a character never suffers more than one of the same at a time.

A character can't be affected by multiples of **the same** special condition at once. Special conditions are not enemy or allied effects: damage they inflict doesn't grant Power to the target.

THE 10 SPECIAL CONDITIONS

BLEED

The character suffers 1 damage at the end of each of its Activations.

HEX

The character doesn't roll additional dice for its Critical results during attack, defense, or dodge rolls.

INCINERATE

The character rolls 1 fewer defense die when making a defense roll.

JUDGMENT

The character does not gain Power when suffering damage from enemy attacks.

POISON

The character loses 1 Power during the Power Phase.

ROOT

The character must spend 1 Power before using an Active or Reactive superpower.

SHOCK

The character rolls 1 fewer attack die when making an attack roll.

SLOW

The character can only use the Short (1) Movement Tool while Advancing.

STAGGER

When the character activates, its first action must be a Shake action, and that action must remove Stagger.

STUN

If an effect would cause the character to gain more than 1 Power, it gains only 1 Power instead.

A character removes all special conditions when it becomes Dazed (Cleanup Phase). Some abilities grant **Immunity** to a named special condition: an immune character that already has it removes it immediately.

Terrain & Special Movement

Throw • Push • Place • Climb • Cover • Dodge

Four independent movement types, plus the two rules that apply when they cause a collision or pass near terrain.

The 4 Special Movement Types

Each is triggered by a different source (attack, superpower, special rule) — these aren't steps in a single sequence.

THROW

The character/object moves in a straight line until it collides. Against terrain: 1 damage, terrain is destroyed if smaller than the thrown character. Against a character: 1 damage, the target must make a Dodge roll.

PUSH

Follows all the same rules as a Throw, except it **never causes a collision** with other characters or objects.

PLACE

The character/object appears anywhere within the stated Range. Uses a **Range Tool**, not a Movement Tool.

CLIMB

Advances Short (1) regardless of the character's Speed, and is treated as **Size 5** for this movement — letting it scale most terrain.

Cover

For a defender to benefit from a terrain feature's cover, all 3 of the following requirements must be met:

- The defender is within Range 1 of a terrain feature the same Size or larger.
- A straight line can be drawn from the attacker's base to the defender's base through that feature.
- The attacker is not within Range 2 of the defender.

Effect: during the Modify Defense Dice step, the defender may change the result of one defense die to a Block.

Dodging (after a collision)

When a terrain feature or another Thrown/Pushed character collides with a character, that character may dodge to reduce the damage:

- 1 Roll dice equal to the dodging character's **Physical Defense**.
- 2 Roll 1 additional die for each **Critical** in that initial dodge roll.
- 3 Modify the dodge dice using any available special rules and effects.
- 4 Reduce the **3 incoming damage** from the collision by 1 for each **Critical**, **Wild**, or **Block** rolled.
- 5 Suffer any remaining damage.

Interactive terrain (lampposts, cars, buildings...) can be thrown and destroyed. **Non-interactive terrain** (called out on a Crisis Card, or modeled into the battlefield) can be neither thrown nor destroyed.
