

Can I Shoot This Target?

Eligibility • Line of Sight • Modifiers • Shooting Into Melee

Follow this tree at a model's Shoot ACTION, to determine whether the attack can be declared and resolved.

Cover

The target is in **Cover** if it is in contact with a terrain piece that is at least ½" high and at least as wide as its base, and the terrain piece lies between it and the shooter.

Shooting Into Melee

If the target is within 1" of a **friendly** model, roll 1d6 before resolving the shot: **1-3** hits the ally, **4-6** hits the intended target.

Ranged Attack modifiers (cumulative, applied to the Success Roll)

+1 DICE

Elevated position: the shooter is at least 3" higher than the target.

-1 DICE

Cover: the target is in Cover (see box above).

-1 DICE

Long Range: the target is beyond half the weapon's maximum range.

1 Can my model declare a Shoot ACTION?*

Yes

No

Cannot shoot

2 Is there a target in Line of Sight and in range?

Yes

No

Shot possible**

No valid target

* Three cumulative conditions: the model must be more than 1" from every enemy model, be armed with a Ranged Weapon, and not have already taken a Charge or Fight ACTION this Activation — unless the weapon used has the ASSAULT Keyword.

** Resolve the shot with the « **Success & Injury Rolls** » sheet, applying the cumulative modifiers above to the Success Roll.

Can I Declare and Succeed at a Charge?

Target • Interposing • Charge Bonus • Diving Charge

Follow this tree at a model's Charge ACTION, to determine whether it can be declared and whether it reaches its target.

◆ Interposing Enemy Model

If the shortest route to the target would take you within 1" of **another** enemy model, you must pick that model as the target of the charge instead, or charge in a different direction.

▲ Diving Charge

Convert a charge into a Diving Charge if the model jumps at least 3" and lands within 1" of the target. Risky Success Roll: **Failure** → Down + a Falling Injury Roll; **Success** → +1 DICE to the next Melee Attack the model makes, no Falling Injury Roll.

* The model does not automatically Fight: declare a Fight ACTION separately if you wish and are able to. If the move included a jump of 3" or more, you can convert the charge into a **Diving Charge** (see box).

** The model must still move its full Charge Bonus towards the target, but stays wherever that move left it — it cannot Fight this turn.

Success & Injury Rolls

Success Roll · Injury Roll · Blood & Blessing Markers

The game's core mechanic: every risky action calls for a Success Roll, and every blow landed calls for an Injury Roll.

How to take a roll (Success or Injury)

- 1
- Take **2 base dice**.
- 2
- Add any applicable **+DICE/–DICE** (a +DICE and a –DICE cancel out in pairs: keep only the remainder).
- 3
- Roll all the dice.
- 4
- Keep the **2 highest results** (or the 2 lowest if the net dice added is negative).
- 5
- Add the two kept results together and check the table for that roll.

1 Success Roll

triggered by any action that calls for a roll

Total 2 to 6	FAILURE
Total 7 to 11	SUCCESS — hits / accomplished
Total 12 or more	CRITICAL SUCCESS — +1 INJURY DICE to the next roll

2 Injury Roll

only if the Success Roll hit (Success or Critical)*

Total 1 or less	NO EFFECT — unharmed
Total 2 to 6	MINOR HIT — 1 Blood Marker
Total 7 to 8	DOWN — 1 Blood Marker (2 if already Down)
Total 9 or more	OUT OF ACTION — model removed

Common Injury Roll modifiers (cumulative)

- 1 INJURY DICE** per **Blessing Marker** spent by the target's player.
- +1 INJURY DICE** per **Blood Marker** spent by the attacking player.
- +1 INJURY DICE** **Critical Success** on the Success Roll that preceded it.
- +1 INJURY DICE** Melee Attack against a target that is **Down**.
- INJURY MOD.** target's **Armour** and **Battlekit** (the total negative cannot exceed –3).
- +/–** any **Ability** or **Keyword** that explicitly applies to the Injury Roll.

Down — consequences (until the model stands back up)

- If a model is taken Down during **its own Activation**, that Activation ends immediately.
- Add **–1 DICE** to any Success Roll taken for it.
- It cannot be moved until it stands back up — unless it Falls (see « Special Movement »).
- It stands back up at its next Activation, but its **Movement Characteristic** (including any Charge Bonus) is **halved** for the rest of that Activation.
- If it is taken Down within 1" of a ledge, take a Success Roll before placing it Down: Success → Down without Falling; Failure → it Falls from the nearest ledge, then is taken Down.

* INJURY DICE and INJURY MODIFIERS only apply to the Injury Roll, never to the Success Roll that precedes it (and vice versa for a Success Roll's +/–DICE).
Bloodbath Roll, Blood & Blessing Markers: see the « **Blood & Blessing Markers** » sheet for the detail of these three resource rules.

Blood & Blessing Markers

Who Spends What • Cap of 6 • Bloodbath Roll

Blood Markers

Maximum 6 per model

Each time a model suffers a wound (whatever the Injury Table result), place **1 Blood Marker** next to it.

SPENT BY YOUR OPPONENT

When you take a **Success Roll** for this model, your opponent may spend one or more of its Blood Markers: **-1 DICE** per marker spent.

SPENT BY YOUR OPPONENT

When your opponent makes an **Injury Roll** against this model, they may spend one or more Blood Markers: **+1 INJURY DICE** per marker spent.

Blessing Markers

Maximum 6 per model

Work like Blood Markers, but to the model's advantage. Each time it receives a blessing, place **1 Blessing Marker** next to it.

SPENT BY YOU

When you take a **Success Roll** for this model, you may spend one or more of its Blessing Markers: **+1 DICE** per marker spent.

SPENT BY YOU

When your opponent makes an **Injury Roll** against this model, you may spend one or more Blessing Markers: **-1 INJURY DICE** per marker spent.

Bloodbath Roll

When you make an **Injury Roll for an enemy model**, you can spend the Blood Markers you've accumulated on it to convert that roll into a Bloodbath Roll: roll **3D6** instead of 2D6 (or **4D6** if the weapon has the DEADLY Keyword), and keep the 3 (or 4) highest or lowest results instead of 2.

COST

6 Blood Markers — or only **3** if the target is already **Down**.

Does My Warband Need a Morale Check?

Casualty Threshold • Shaken Warband • Fleeing

★ LEADER

Add +1 **DICE** to your Warband's Morale Check if at least one friendly model with this Keyword, that is not Down or Out of Action, is on the battlefield.

1 Is half (rounded up) of my Warband Down or Out of Action?

Yes

No

✓ No check — Warband carries on

2 Morale Check (Success Roll*) — Success?

Yes

No

✓ Warband carries on normally

✗ Warband is Shaken**

Rounding: half is always rounded **up** (e.g.: 5 models → threshold of 3).

* A Morale Check is a normal Success Roll for the Warband (see « Success & Injury Rolls »).

** While the Warband is Shaken: all its Success Rolls become **Risky Success Rolls**. At the Morale Phase of the next Turn, take another Morale Check for it — even if it has dropped back below the casualty threshold. **Success** → it is no longer Shaken (though it may become so again later). **Another Failure** → the Warband flees and you immediately lose the game!

Sounding the Retreat: after a failed Morale Check, you can choose to flee immediately and concede the game instead of letting your Warband become Shaken.

Special Movement

Climbing • Jumping • Falling

▲ Climbing a Sheer Surface

A model that starts its move within 1" of a wall or sheer surface can attempt to Climb it (up or down), if it has enough Movement to clear the entire surface.

SUCCESS

Risky Success Roll. The model is placed directly at the top or bottom of the surface, and can carry on with its move if it has any movement left.

FAILURE

The model does not move, and its Activation ends immediately.

◆ Jumping

A jump is part of a Move ACTION: the situation determines whether it calls for a roll.

CROSSING A GAP (width ≤ half its Movement)

Move the model up to the edge of the gap, then take a **Risky Success Roll**. Success: it lands on the other side and can carry on with its move. Failure: it **Falls** (see Falling box) and its Activation ends.

JUMPING DOWN

This jump is **free** (it does not affect the distance the model can move) and requires **no Success Roll**. However, if it is 3" or more, it is treated as **Falling** (see box) before the move continues.

▼ Falling

Triggered by a failed jump across a gap, or by Jumping Down 3" or more. Move the model to the first flat surface directly beneath its position.

INJURY ROLL

If the Fall is **3" or more**, make an Injury Roll for the model: add **+1 INJURY DICE** for every full 3" fallen (3-5" = +1 DICE, 6-8" = +2 DICE, etc.).
